

### **Instruction:**

- There are three buttons, when the program will start
  - 1.Chairman
  - 2.Faculty
  - 3.Student

### **STUDENT:**

After clicking the student button, then we have to input id and password which is loaded from database. My database name is research and I used Four databases [student, faculty, chairman & registration]. I have inserted Id as studentId 250,251,252,253 and password is used 123 **for all password needed in my assignment.** Like:

StudentId:250

Password:123

If Id and password don't match, there will be a prompt message. After successful login, A window will appear where are two buttons. One is [Apply for Research] Button and another is [See notification] button.

\*\*\* If [Apply for Research] button is clicked then a User interface will appear. There is a form and have to input Supervisor Initial, Research Topic, StudentId1, StudentId2, StudentId3 and lastly Click the apply button. The submitted application is shown in a table below.

\*\*\* Student will get notification about their research proposal when Chairman Approve or Reject the proposal.

## **FACULTY LOGIN**

For Faculty login, I inserted three supervisor's initials [KMH, AHQ, HT] and password is used 123 for all. Those are required to log in.

When Login is successfully completed, another window will Appear where a supervisor's initial has to be inserted and click [See Application] button. Then Specific supervisor can see only the list of Applications that are applied to him. After that teacher can approve or reject the application. If Supervisor approve any application then it will go to the chairman.

## **Chairman**

For chairman login, SM as initial and 123 is used. After login Chairman can see the list of research proposal in table view that are already approved by the specific supervisor. Then Chairman can approve or reject the proposal is approved, then Student will get a notification.
